1 Introduction

TekWave's dorm companion app, Dormio, is an app designed to alleviate students' everyday stress. It provides a suite of features that simplify meal planning, personal finances and event coordination with other students. Key characteristics of this app include reducing user's errors through automation, centralizing customizable meal plans with the whole dorm and a budgeting management feature to help users plan their finances. This companion app is intended to be flexible and customizable so that it can be incorporated within a wide variety of dorm infrastructures.

Dormio is mainly intended towards students but Dormio also includes features that plug into a dorm's existing system like meal planning and maintenance requests for dorm administration as well. Dormio does this in an attempt to centralize any features a student might need all into one convenient location. It bridges the gap between dorm organization and students' needs that many dorm companion apps do not do.

1.1 Purpose

This document provides a clear overview of the core functions and direction of the Dormio app. It describes the general use case of the app as well as the business decisions and assumptions that have guided the creation of the app.

1.2 Scope

1.2.1 In Scope

- Documentation and User Guides that demonstrate the flow of the application
- User accounts with profiles
- Customizable meal plan selection
- Budget management system for personal finance including bill splitting
- Database containing all students information
- Handling maintenance requests
- Export information through CSVs

1.2.2 Out of Scope

- handling of online payments
- handling of sensitive information
- tools for migrating existing information into the Dormio app
- integrating the software with third party apps
- Group chat for members within a dorm
- No live support/help desk

1.3 Definitions, Acronyms, and Abbreviations

Term	Explanation
CSV	Comma-separated values is a data format where commas are used to separate values within a row and new lines to separate the rows. This format is widespread in data applications
MVP	Minimum Viable Product. It is the bare minimum version of a product that is still able to meet the customers requirements. An MVP can later be expanded into a full product.

2 Positioning

2.1 Business Opportunity

With the current tools that are being used in today's day and age, students struggle to keep track of their daily activities as the tools for managing their work schedules are spread out across multiple platforms. Using different platforms makes it difficult to manage their workload in an efficient and organized way. The proposed system will consolidate the problem of using scattered tools to one centralized system.

2.2 Problem Statement

The Problem of	The Well-being
affects	Students who live in student residence
the impact of which is	Students struggle to balance daily life with academics which lead to stress
a successful solution would be	Adding an integrated scheduling system to manage task

Table 1 Problem Statement

The Problem of	Managing Finances
affects	Students living in school dormitory without proper budget planner
the impact of which is	Lead to stress if they don't have a way to easily manage their finances
a successful solution would be	To create a software that will help students to manage their budget

The Problem of	Meal Planning
affects	Students living in school dormitory without customizable meal planner
the impact of which is	Having a poor eating habits and nutrition due to heavy workloads
a successful solution would be	By adding a meal plan that students can customize to their calendar

The Problem of	Scheduling conflict in chores
affects	Students living in school dormitory who need to assign chores
the impact of which is	It might cause a confusion with unequal distribution of workload
a successful solution would be	To provide a task assignment manager where students can create and assign chores with reminder notification

The Problem of	Maintenance Request
affects	Students living in school dormitory who need to submit and track maintenance request
the impact of which is	It will cause a delay if both party are not tracking and notified by the request
a successful solution would be	To provide a trackable ticket request to be submitted and managed

2.3 Product Position Statement

For	Students living in school residence
Who	Wants manage their workloads efficiently
The Dormio	is a centralized mobile companion application
That	Allows students to request maintenance, to schedule their tasks, to manage their budget and chores, and to have a customizable meal planner.
Unlike	DormBuddy
Our product	Prioritize actual needs of the students by giving them a centralized planner specifically for living in school residence

Table 2 Product Position Statement

2.4 SWOT Analysis

Strengths	Weaknesses
Consolidates Multiple student needs	Lack of Live-Support
Flexible/Customizable Options eg.Meal planning	No Migration tools
Automation	Dependency on Dorm Systems
Opportunities	Threats
University/College Partnerships	Competition eg. other apps
Monetization	User Retention
Other Markets & Residential places	Security & Data Privacy

3 Stakeholder and User Descriptions

3.1 Stakeholder Summary

Stakeholder Name	Represents	Role
TekWave	Owns and funds the project.	Project Sponsor - Provides direction and approves the scope of the project and budget. Ensures the project aligns with business goals
Laily Ajellu	Project Manager	Project Lead - Manages the Project team and oversees the development process. Laily makes sure that deadlines are being met
Dorm Administrators	University or College Housing Dep.	Decision Maker - Decides if the app can be implemented in the dorm like approving features such as maintenance requests and centralized meal planning
Technical Team	The developers and QA Testers	Implementation Team - Develops the app, writes code and tests the system while ensuring security and meeting all requirements

Table 3 Stakeholder Summary

3.2 User Summary

User Name	Description	Responsibilities	Stakeholder
Student-Resident	Fully-time dorm resident who balance studies	-Creates Profiles and Meals plans -Submits Requests -Recives announcements from the system with reminders	Student-Resident
Project Manager	Oversees the development of the app	Monitors project progress and tracks system features. Ensures deadlines are being met and app is running adequately	Laily Ajellu

User Name	Description	Responsibilities	Stakeholder
Dorm Manager/Administrator	Private Housing manager overseeing the property	-Approve bookings for shared spaces - Posts Announcements the effect Student-Residents - View Summaries of Resident usage and submitted request	TekWave / Property
Maintenance Worker	Staff responsible for repairs and uptake	-Recives maintenance tasks in ticketing system -update task when finished	Service staff

Table 4 User Summary

4 Stakeholder Requirements

ID	Requirement	Stakeholder
SR-1	The system must provide a budget management tool for personal finances	Student
SR-2	The system must allow students to split bills with roommates	Student
SR-3	The system must provide customizable meal plans that students can select and manage	Student
SR-4	The system must allow students to submit maintenance requests	Student
SR-5	The system must allow dorm administrators to receive and track student maintenance requests	Dorm Administrator
SR-6	The system must be able to export student data into a CSV file for recordkeeping.	Dorm Administrator
SR-7	The system must be scalable to support a growing number of dorms and users.	TekWave
SR-8	The system must have a clear and intuitive user interface for ease of use.	All Stakeholders

Table 5 Stakeholder Requirements

5 System Features

ID	Feature	Stakeholder Requirement ID
F-1	Personal Budgeting System	SR-1
F-2	Bill Splitting Functionality	SR-2
F-3	Meal Planner	SR-3
F-4	Maintenance Request System	SR-4, SR-5
F-5	Data Exports	SR-6
F-6	Scalable Backend	SR-7
F-7	User-Friendly Dashboard	SR-8

Table 6 System Features

6 Assumptions

These are the core assumptions for the Dormio project. If any of them are incorrect, they could seriously impact the project's success.

Reliable Internet: The app's design as a centralized hub assumes students have consistent internet access to use its features

Dorm Integration: The project assumes that the Dorm Administration team will adopt a new system for tasks like maintenance requests while providing necessary access to internal systems

Data Security: It is assumed that the app's security measures are sufficient enough to protect sensitive student information

Student User Behaviour: It is assumed that the target user group will be willing to consistently use a new app for tasks such as financial management, meal plans, etc

7 Constraints

These are the process Constraints/limitations of the proposed project

Timeline: The project must be completed and ready to launch by Spring 2026

Budget: The project operates under a fixed budget for development, marketing, and post-launch support

Platform Compatibility: The app may need to be developed for both IOS & Android to reach the student market

Third-Party APIs: The first version of the app is limited and won't integrate with external services such as banking apps

Existing Dorm Systems: The app must be compatible with the systems already in place and must not require major changes on the Dormitory's part
