

Ibrahim Abdillahi

Hello,

I'm reaching out to express my interest in a summer position within your team. I'm currently studying Computer Programming and Analysis at George Brown College and am looking for an opportunity to apply what I've learned in a practical, real-world setting.

My experience comes from building projects that focus on functionality and user needs. For example, I worked on a mobile application called Dormio that helps students manage tasks like budgeting, scheduling, and maintenance requests. I've also created a real-time messaging application with user authentication and room-based communication, and developed a web app that displays SpaceX launch data using external APIs. Alongside this, I've experimented with machine learning models to better understand data-driven problem solving.

Beyond coding, I take pride in being reliable, adaptable, and easy to work with. I'm comfortable learning new technologies on the fly and enjoy collaborating with others to find efficient solutions.

Some of my recent projects include:

- **Dormio (Capstone Project)**
A mobile application designed to simplify student residence life by managing maintenance requests, budgeting, meal planning, and scheduling.
- **Weather & Calculator Applications**
Developed two interactive web applications, including a weather app that displays real-time data for any city using the OpenWeatherMap API, and a calculator app that performs basic arithmetic operations with a user-friendly interface.
- **Machine Learning Projects**
Worked with datasets like Fashion MNIST and CIFAR-10 to build and evaluate neural network models.

I'm looking for a role where I can continue to grow, contribute to meaningful projects, and gain industry experience. I would appreciate the opportunity to be considered.

Thank you for your time and consideration.

Sincerely,
Abdillahi
